SUMMARY

Final-year Management Information Systems student and intern with hands-on experience in data analysis: writing SQL, cleaning and modeling data, building Power BI dashboards with DAX, and turning findings into clear recommendations for managers. Also uses Python for analysis and forecasting. Looking for a Data Analyst role where I can learn from experienced analysts, work with real business data and keep improving step by step.

SKILLS

Data Analysis	SQL, Excel / Google Sheets (pivot tables, SUMIFS, XLOOKUP), variance analysis, ANOVA, regression
BI & Visualization	Power BI (DAX, Power Query, star schema), Looker Studio, Google Sheets dashboards
Python	pandas, statsmodels, scikit-learn, XGBoost, TensorFlow / Keras, Jupyter Notebook
Data & Automation	SQL Server, data warehouse design, Google Apps Script, GitHub Actions
Business	Stakeholder interviews, MECE issue tree, KPI definition, data storytelling

WORK EXPERIENCE

Business Analyst Intern **Aug 2026 – Nov 2026**
Saigon International General Hospital (SIG) *Ho Chi Minh City*

Revenue driver analysis (consultations, imaging and lab tests)

- Built a **driver model**: net revenue = visits × (consultation price + order rate × price for imaging and lab tests), which gives 6 drivers the hospital can act on.
- Kept the raw data in one long-format table with filters (period, branch, B2B/B2C, service group) and measured each driver's contribution with the **chain substitution method** and a waterfall chart.
- Drilled down to specialty and doctor level, with visits, prices and order rates side by side.

  Result: Moved the discussion from patient volume to order rates, with a model the team can rerun every month.

Corporate health check dashboard (built from scratch)

- Defined the KPIs with the CEO and FP&A: money waiting at each of 5 stages, **overdue amount × days late** and a 12-month trend, across 4 departments.
- Built a Google Apps Script web app on top of the tracking sheet, with email-based access and **11 data-quality checks** (missing due dates, duplicate IDs, paid but not closed).

  Result: The first dashboard for this process: the CEO and FP&A see every contract's stage without manual counting.

Promotion analysis (first task)

- Explored promotion data with **SQL**, broke the spend down with a MECE issue tree by policy, customer group and service, and tested its link with revenue using **ANOVA and regression**.

  Result: Promotions had only a weak link with revenue, so only the most-used policies needed review.

Automation and reporting

- Built an Apps Script tool that extracts data from PDF files into the data-entry sheet, a **Looker Studio** report on surgery and inpatient activity, and weekly contract data updates for the management report.

Business Analyst Intern & Project Lead **Aug 2026 – Nov 2026**
Public Transport Management Center (MCPT) *Ho Chi Minh City*

Project: Bus pass issuance system for citizens (web, iOS and Android)

- Led a 40-member student team in 4 squads (BA, Frontend/Mobile, Backend, QA) from requirement gathering to UAT and handover.
- Took part in designing the **ERD and data dictionary** for citizen identity checks and card number management.

- Wrote the SRS and user stories, modeled the processes in BPMN 2.0, and coordinated UAT with MCPT staff.
  Result: Delivered a working web and mobile system, with guides for connecting it to MCPT's existing systems.

PROJECTS

Student Mental Health Analytics — Power BI Developer **Nov 2025**
UTH coursework, team of 6 *Data Warehousing & DSS*

- Built a **star schema** from 7 SQL Server tables and wrote **24 DAX measures** and 11 calculated columns; used AVERAGEX and RELATED over the fact table so days without a survey did not distort the KPIs.
- Designed 4 dashboards and 11 tooltip, insight and recommendation pages; audited my own model after the course and fixed 6 data errors, such as a wrong grain that inflated sleep counts about 19 times.
  Result: 26.5% of students had at least one severe day, and those sleeping under six hours score 18% higher on the PHQ-4; rated highly by lecturers.

Air Quality Monitoring for 8 Cities — Power BI & Alerts **2025**
UTH coursework, team of 4 *Artificial Intelligence*

- Connected Power BI to 24 live CSV files on GitHub with **Power Query** (67,450 hourly records) and built a model with a method selector that compares Z-score and Isolation Forest.
- Built an automated alert workflow with **GitHub Actions** that updates one GitHub Issue and sends an email.
  Result: Alerts need an absolute AQI threshold besides anomaly detection: Hanoi is above AQI 100 in 48.8% of hours, yet Z-score flagged it only 13 times.

Time Series Forecasting — 7 Models on 5 Datasets **2026**
UTH coursework, team project *Time Series Analysis & Forecasting*

- Compared ARIMA / SARIMA, Linear Regression, XGBoost, VAR and LSTM with one fair evaluation: the same 70/15/15 split and a walk-forward test.
- Re-ran the notebooks and fixed 4 evaluation errors, including **data leakage** that produced a "perfect" RMSE of 0.
  Result: SARIMA cut error by 58–67% on seasonal monthly data, and XGBoost reached 1.84% MAPE on hourly electricity load.

ERP Projects on Odoo 19 — Business Analyst & Developer **Apr – Jul 2026**
UTH coursework: retail purchasing (team of 6), badminton booking (individual) *Source on GitHub*

- Retail purchasing: interviewed staff, modeled AS-IS / TO-BE processes in BPMN 2.0, ran a fit-gap analysis of 9 areas and built 3 custom modules in **Python and PostgreSQL** (about 70% of 13,700 lines of code).
- Badminton booking: built 3 custom modules and a **CSV export package for Power BI** covering bookings, payments and POS lines (about 23,000 lines of code).
  Result: Budget checks moved before approval, and double booking is blocked at the database level.

Personal Portfolio Website **2026**

- Bilingual (English / Vietnamese) portfolio with a case study for each project, built in React and TypeScript with Claude Code as a coding assistant.

EDUCATION

University of Transport Ho Chi Minh City (UTH) **2023 – 2027 (expected)**
Bachelor of Management Information Systems *GPA 3.64 / 4.0*

- Scholarship for Academic Excellence (Semester 1, 2023).
- Relevant coursework: Databases, Statistics, Data Warehousing & Decision Support Systems, Time Series Analysis & Forecasting, Artificial Intelligence.

CERTIFICATION

Data Analytics — VTI Academy **Oct 2024**
