SUMMARY

Final-year Management Information Systems student and Business Analyst intern with hands-on experience in gathering requirements, writing SRS documents and user stories, modeling processes with BPMN and UML, and supporting UAT. Also uses SQL and Power BI to analyze data and support decisions. Looking for a Business Analyst role where I can learn from experienced analysts and keep building a strong data foundation.

SKILLS

Business Analysis	Requirement elicitation, stakeholder interviews, AS-IS / TO-BE analysis, fit-gap analysis, UAT
Documentation	SRS, PRD, user stories, acceptance criteria (Gherkin), use case specifications, data dictionary, user guides
Modeling	BPMN 2.0, UML (use case, activity, sequence, class), ERD, draw.io
Data Analysis	SQL, Power BI (DAX), Looker Studio, Excel / Google Sheets, Python (pandas), ANOVA, regression
Tools & Methods	Scrum, Google Apps Script, Odoo ERP, Docker, GitHub, ChatGPT / Claude for drafting

WORK EXPERIENCE

Business Analyst Intern & Project Lead **Aug 2026 – Nov 2026**
Public Transport Management Center (MCPT) *Ho Chi Minh City*
Project: Bus pass issuance system for citizens (web, iOS and Android)

- Led a **40-member student team in 4 squads** (BA, Frontend/Mobile, Backend, QA); broke the work into sprint tasks with squad leads and tracked milestones.
- Acted as the main contact between MCPT leadership and the team; ran on-site interviews to find operational pain points.
- Modeled the **AS-IS and TO-BE processes in BPMN 2.0** and drew UML use case, activity and sequence diagrams.
- Wrote and reviewed the **SRS and PRD** with a co-lead BA: functional and non-functional requirements, use cases, and user stories with **Gherkin acceptance criteria**.
- Prepared and led the first demo with MCPT leadership to agree on what is in scope and out of scope.
- Took part in designing the ERD and data dictionary for citizen identity checks and card number management.
- Coordinated **UAT** with MCPT staff and wrote the installation, user and integration guides.
  Result: Delivered a working web and mobile system, with guides for connecting it to MCPT's existing systems.

Business Analyst Intern **Aug 2026 – Nov 2026**
Saigon International General Hospital (SIG) *Ho Chi Minh City*

Corporate health check dashboard (built from scratch)

- Mapped a **5-stage process** (exam → medical conclusions → fee sheet → invoice → payment) across Sales, medical secretaries, doctors and Accounting, and agreed on an owner and a deadline for each stage.
- Turned the questions of the CEO, FP&A and department heads into **requirements for 4 screens**: Overview, Actions, Contract detail and Settings.
- Built it as an Apps Script web app with email-based access and **11 data-quality checks** (AI-assisted coding).
  Result: The first dashboard for this process: the CEO and FP&A see every contract's stage without manual counting.

Revenue driver analysis (consultations, imaging and lab tests)

- Broke net revenue into visits × price × order rate and measured each driver's contribution with the chain substitution method, down to specialty and doctor level.
  Result: Moved the discussion from patient volume to order rates, with a model the team can rerun every month.

Promotion analysis (first task)

- Explored promotion data with **SQL**, broke the spend down with a MECE issue tree, and tested its link with revenue using ANOVA and regression.
  Result: Promotions had only a weak link with revenue, so only the most-used policies needed review.

Automation and operations

- Built an Apps Script tool that extracts data from PDF files into the data-entry sheet, and a Looker Studio report on surgery and inpatient activity.
- Supported customers at the corporate health check desk to understand daily operations and their pain points.

PROJECTS

Retail Purchasing on Odoo 19 — Business Analyst & Lead Developer **Apr – May 2026**
UTH coursework, team of 6 *Live demo and source on GitHub*

- Interviewed retail staff and listed the pain points: manual requests by email, data out of sync, and budgets checked only after buying.
- Modeled AS-IS / TO-BE processes in BPMN 2.0 and ran a **fit-gap analysis of 9 areas** against standard Odoo.
- Turned the business rules into requirements, then built 3 custom modules (about 70% of 13,700 lines of code) and deployed them with Docker and GitHub Actions.
  Result: Budget checks moved before approval, and one purchase request replaces long email chains.

Badminton Court Management on Odoo 19 — Business Analyst & Developer **Jun – Jul 2026**
UTH coursework, individual *Source on GitHub*

- Surveyed how a court business runs, defined 3 user roles and a 6-state booking lifecycle, and wrote the booking and pricing rules as requirements.
- Built 3 custom modules plus PayPal payment (about 23,000 lines of code).
  Result: Double booking is blocked at the database level, and a group pays for several courts with one POS order.

Student Mental Health Analytics — Power BI Developer **Nov 2025**
UTH coursework, team of 6 *Data Warehousing & DSS*

- Built the Power BI layer on a SQL Server data warehouse: star schema, **24 DAX measures**, 4 dashboards and 11 insight and recommendation pages.
  Result: Students sleeping under six hours score 18% higher on the PHQ-4; rated highly by lecturers.

Air Quality Monitoring for 8 Cities — Power BI & Alerts **2025**
UTH coursework, team of 4 *Artificial Intelligence*

- Connected Power BI to 24 live CSV files on GitHub and built an alert workflow that compares Z-score with Isolation Forest.
  Result: Alerts need an absolute AQI threshold besides anomaly detection: Hanoi is above AQI 100 in 48.8% of hours.

Personal Portfolio Website **2026**

- Bilingual (English / Vietnamese) portfolio with a case study for each project, built in React and TypeScript with Claude Code as a coding assistant.

EDUCATION

University of Transport Ho Chi Minh City (UTH) **2023 – 2027 (expected)**
Bachelor of Management Information Systems *GPA 3.64 / 4.0*

- Scholarship for Academic Excellence (Semester 1, 2023).
- Relevant coursework: Systems Analysis, Data Warehousing & Decision Support Systems, Time Series Analysis & Forecasting, Artificial Intelligence, Project Management (WBS, Gantt chart, EVM).

CERTIFICATION

Data Analytics — VTI Academy **Oct 2024**
